

MAJOR Innovations When It Comes Down To Your WIRE™

Maximizing Screening Efficiency

Maximizing Screening Efficiency With Screen Media From Major Wire

- Flex-Mat® 3 High-Performance, Self-Cleaning Screen Media
- OptimumWire® Woven Wire
- Stainless Steel Woven Wire
- Double-Weave™ Woven Wire
- LFM™ Harp Wire
- Polyurethane
- Rubber
- Punch Plate
- Accessories

MAJOR Innovations When It Comes Down To Your WIRE™

Our Focus Is Helping Producers Put More Spec Product On The Ground

At Major Wire, our core philosophy is to help producers maximize their screen production – not winning the next screen media order. Our sales force and local dealers partner with customers to maximize throughput on every deck on every screen box.

This commitment demands constant innovation at Major Wire, including:

- Pioneering an entirely new self-cleaning screen media category with Flex-Mat® 3
- Engineering Double-Weave™ woven wire for heavy, top-deck applications
- Producing LFM™ Harp Wire with polyurethane strips for higher wear life

Our sales force and dealers understand the entire aggregate production process, including all screen media, so our recommendations have proven to be highly effective. This helps explain why Major Wire has become a major driving force in the industry.

Wire Screen

Square Openings	1/8" to 8" with custom opening sizes available. Standard diameters from 0.47" to .750"
Slotted Openings	Single chute, triple chute or Harp Wire
Fine Cloth	Available from 6 to 500 mesh
Double-Weave™	Performs better than heavy gauge, single-strand wire or perforated plate
LFM™ Harp Wire	High performance harp wire with polyurethane strips for longer wear life

Wire Selection

OptimumWire®	Made of tempered wire for high resistance to abrasion. Used in most applications. Available in all wire screen types
Stainless Steel	Type 304 standard. Available in .035" to .375" wire diameter

Self-Cleaning Screen Media

Flex-Mat® 3
 Neither woven wire nor polyurethane, Flex-Mat 3 can dramatically increase throughput of spec product on screens with blinding, pegging and clogging problems. Flex-Mat 3 also works well on screens where extra throughput is possible, but limited by the amount of open area available with wire or synthetic screens. Thousands of applications since 1996 have proven this product's ability to increase production. A full range of opening sizes and wire diameters are available to custom fit each screen.

Four Configurations

Flex-Mat "D"	Majority of applications and produces accurate material separation
Flex-Mat "T"	Applications with high impact
Flex-Mat "T"	Very fine screening
Flex-Mat "S"	Separates maximum amount of fines, leaving a high-quality product

High-Temperature Woven Wire – Variety of configurations with large openings and longer wear life

Synthetic / Punch Plate

- Open cast polyurethane for longer life**
- PolyTend™ – side- and end-tensioned panels are molded to fit traditional crown bar screens, so you can quickly switch out woven wire or PolyTend panels, or install a combination of both
 - PolyClip™ – features a unique anchoring system to fit any frame
 - Supersoft – reduces blinding while increasing wear life – available with all systems
 - Dual hardness for scalping decks
 - Proprietary systems
 - Competitive systems
- Molded Rubber Panels** – to your specifications
Punch Plate – to your specifications

Major Wire has manufactured screen cloth since 1884 and today operates one of the largest dedicated screen cloth manufacturing facilities in the industry.

Ask Major Wire To Be Your Screen Media Solution

"With our experienced sales force and local dealers, Major Wire can bring your operation up to maximum screening efficiency, resulting in far more spec product on the ground. Only Major Wire sees this as its most important commitment to customers.

Jean Leblond, Owner

This is my personal guarantee."
